

## Two New Products and Two New Product Features Released by Iwanit Products at 2008 International Pool & Spa Show

Las Vegas, NV-- Iwanit Products, launched two new products and revealed a new feature to two of their popular products at this years International Pool, Spa and Backyard Expo.

The newly released **CoverCatch** provides an efficient way to capture the debris that accumulates on the solar pool cover in the area just before it is rolled up and out of the pool. Debris can be hosed or swept along the cover and onto the exposed portion of this floating net which is then folded for quick and easy debris removal

Also released **SwivelSkim-Elite** a smaller version of its field proven predecessor the **SwivelSkim-Pro** which was originally designed and made for pool maintenance technicians. Now pool owners can enjoy the benefits that the Pro model provides with the smaller sized Elite. A revolutionary floating, bi-directional pool surface skimmer with a rotating net that collects floating debris in both directions. Every square inch of the pool surface can now be skimmed effortlessly and even the smallest debris you normally can't see can be removed. No more lifting heavy skimmers on the end of a long pole. No more back-straining, side-to-side movements to capture debris.

A new slot was added to the nifty **PolePivot** that now allows the user to steer most vacuum heads on the pool floor. Also, eight more pins were added to its rugged push-button release mechanism allowing it to pivot and lock in 22.5 degree increments. Tools such as a net or brush can be adjusted into the optimum angle needed. These features are also joined with PolePivots flared hole guides that eliminate the users finger tips from getting pinched when connecting a tool.

A new custom rectangular net was also added to the **EasySkim**. This will give the handy pole-end float attachment a net best shaped for use with this floating pole attachment that glides across the pool surface easily to the full length of the pole, allowing the net to dip in and out of the water to capture debris with no lifting or strain to the user.

**Iwanit Products** has been designing new and innovative products for over fifteen years. In the past five years they have focused on developing a line of pool maintenance products, with their biggest attention in solving user fatigue with ease of use and quicker completion time. Each of their five pool products incorporates all three of these elements and with much better results then any other product available.
